

NXTPOWER

DELIVERING ULTIMATE POWER PROTECTION

> ABOUT US

We are NXT Power, a manufacturer of advanced power quality solutions. Our innovative product line design provides the high quality and best performing transformer-based power conditioners and uninterruptible power supplies on the market. We provide complete power quality solutions to clinical, analytical, industrial, scientific, printing, and retail technology markets.

Every business' electronic equipment is vulnerable to power problems such as power outages, lightning, common mode voltage, and high-voltage transients. Our company provides power protection solutions that businesses around the world rely on every minute, of every day. Our job is to ensure other businesses can continue doing theirs, unimpeded by power outages, poor power quality, or other preventable power problems.

Started in 2020 by a group of power-quality experts and industry veterans, the NXT Power team is here to solve your power problems, provide unmatched customer service, and bring you and your customers next-level power protection.

Our team has over 200 years of experience in the power quality industry. Decades ago, we built a \$75 million dollar company that set the power quality standard. With NXT Power, we improved upon it.

“Every business is vulnerable to outages and other power problems. The NXT Power product line is designed for the 21st century in both look and performance, providing the most commanding technologies in power protection for both domestic and international applications.”

Tom Gornick, President & Founder
